## EDIFICE FUNCTIONAL DEFINITION

### Business flow diagram

### Principles

The INVRPT DtoS message is designed to facilitate the provision of status/static information between a manufacturer's agent (commonly referred to as a distributor) and the manufacturer (commonly referred to as a supplier) to identify the supplier's products and supporting related data that are held by the distributor.

The INVRPT DtoS message supports Point 4. of the business flow above and is designed to transport information related to uniquely identified products. This information comprises but is not limited to:

- Product information,
- Seller and buyer information,
- Inventory location information,
- Inventory quantity and pricing information,
- Date codes and sales numbers,
- Layered inventory at different prices.

The INVRPT DtoS message is restricted to the transmission of full inventory information.
