EDIFICE FUNCTIONAL DEFINITION

Business flow diagram

Principles

The INVRPT StoD message is designed to facilitate the provision of information between a manufacturer (commonly referred to as a supplier) and a manufacturer's agent (commonly referred to as a distributor) on the status of the supplier's product lead time and/or availability.

The INVRPT StoD message supports Point 2. of the business flow above and is designed to transport information related to uniquely identified products. This information comprises but is not limited to:

- Product information,
- Seller and buyer information,
- Lead time information,
- Date horizon information,
- Availability information.

Usually, the INVRPT StoD message contains the same products as the distribution PRICAT message, so when, for example quarterly, the content of the PRICAT message changes (new products added and old products withdrawn), also the content of the full INVRPT StoD message will be different, hence the full refresh, which can be either scheduled or sent on request.

The INVRPT StoD message can be used to send variances or updates, for example on a daily basis.

To accommodate the above two scenarios, both 'change' and 'original' message types are catered for by the use of DE 1225 in the BGM segment.

EXPLANATORY NOTES

General

The following abbreviations are used within this document:

DE = Data Element
CO = Composite Data Element
SG = Segment Group

The following codes are used to indicate, in a more detailed and precise way than UN/EDIFACT, the usage of the data concerned in the EDIFICE Message Implementation Guidelines:

<u>UN/EDIFACT</u>	<u>EDIFICE</u>
M (Mandatory)	M (Mandatory)
C (Conditional)	R (Required)
C (Conditional)	D (Depending)
C (Conditional)	A (Advised)
C (Conditional)	O (Optional)
C (Conditional)	N (Not Used)

Mandatory = UN/EDIFACT dictates that the Data Element, Composite Data Element, Segment or Segment Group must be present.

Required = Indicates that the entity is required and must be sent.

Depending = Indicates that the entity must be sent if a particular defined condition or set of conditions exists. The associated conditions must be explained at the appropriate level of detail.

Advised = Indicates that the entity is advised or recommended and should be sent if previously agreed between the trading partners.

Optional = Indicates that the entity is optional and may be sent if previously agreed between the trading partners.

Not Used = Indicates that the entity is not used and should be omitted.

Where a Composite Data Element is indicated as 'Not Used', the column 'usage status' for the Data Elements will remain blank.

The number of occurrences shown in the EDIFICE Message Diagrams indicates the required or maximum number of occurrences for the entity utilisation.

The EDIFICE usage status and number of occurrences for segments or segment groups will be represented analogue to the representation of data elements e.g.:

- R3 The segment or group is required 3 times (fixed number)
- R..3 The segment or group is required up to 3 times (maximum number)

The following table indicates the number of integer and decimal digits to be used for numeric data elements when needed:

Numeric Class	Representation Digits	Integer Digits	Decimals
Dimensions	n..18	15	3
Quantities	n..15	12	3
Volumes	n..18	15	3
Weights	n..18	15	3
Unit Prices	n..15	11	4
Amounts	n..18	15	3
Currency Rates	n..12	6	6
Percentages	n..8	3	5

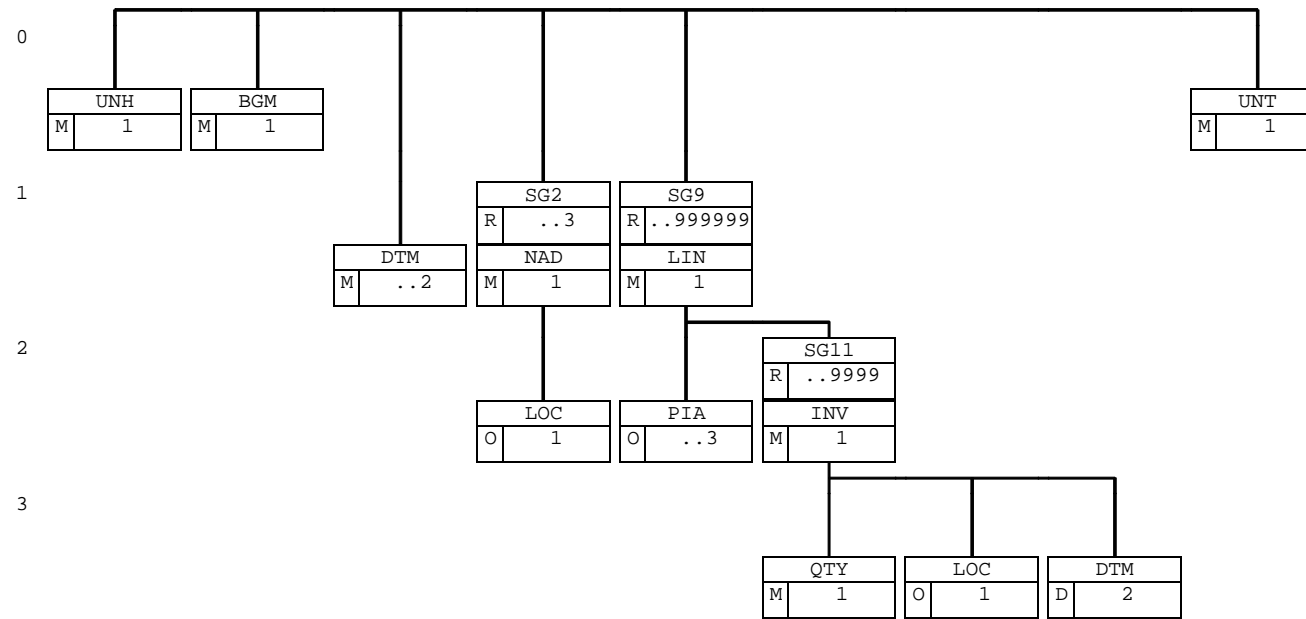

EDIFICE recommends that where there are significant decimals, these are explicitly stated using a decimal mark in a character position. Similarly the minus sign should be used to explicitly state a negative value.

Consistent use of the date/time/period format should be adhered to throughout the entire message. EDIFICE recommends only to use the 'CCYYMMDD' or 'CCYYMMDDHHMM' format.

QTY QUANTITY

Function: A segment specifying a quantity.

Usage : M1

Notes : Where a lead time applies to a quantity range specify the maximum quantity in DE 6060 and use code 'LTQ' in DE 6063.

Where a lead time does not apply to a specific quantity enter zero in DE 6060 and code 'LTQ' in DE 6063.

Where the product is considered to be on allocation use code 'LTQ' in DE 6063 and enter zero in DE 6060. The data elements within the DTM segment should contain the following values: '169' in DE 2005, '99' in DE 2380 and '803' in DE 2379.

Where no lead time can be given use code 'LTQ' in DE 6063 and enter zero in DE 6060. Within the DTM segment use code 'ASK' in DE 2005. DE 2380 and DE 2379 are not used.

When codes '17' or '143' are used in DE 6063, the DTM segment in this segment group does not need to be sent as the inventory report date (code '366' in DE 2005) specified in the header DTM segment applies.
